SAVANT ECOMMERCE · OPENING KEYNOTE

AI at Pets Deli.
Not a tool. An infrastructure.

Tania Moser CEO, Pets Deli

4 country shops · **8** sales channels · **~400** products · **350,000+** pet profiles

PETS DELI

THE STARTING POINT

Everyone can rent the same models.

Nobody can rent what we know.

Three words, each with a number behind it.

Better

As the customer feels it. The right product for every pet, the first time.

Repeat orders, retention, reviews

5–7% → 0

factual errors in product content, before and after our fact gate

Bigger

More customers, new markets, new channels.

New customers, new revenue

~10 a day

finished, on-brand Meta ads, every one approved by a human

Faster

The same result in less time or at lower cost.

Cycle time, cost per case

1 day

for a full market analysis that used to take weeks

Faster, everyone will have. Better, only you can build.

Better

As the customer feels it.

Fact Gate

Every product claim is checked against recipe and rules.

5–7% → 0

factual errors in product content (re-audit)

Right product

Product lists ranked for each pet profile, with the reason why.

1.4×

clicks on personalised lists vs. category lists

Service Assist

Reply drafts for customer care, grounded in evidence.

~5 s

per reply draft, at about half a US cent

Customer voice

Every customer review, searchable in full text.

50,022

reviews in our knowledge base

Better needs what only we have: 350,000+ pet profiles, 406 studies, 50,022 reviews and 85 rules.

Bigger

More customers, markets, channels.

Ad Machine

Turns proven market signals into on-brand Meta ads.

~10 / day

finished ads, each approved by a human

Visual Machine

On-brand images on demand, logo and fonts always exact.

160

Amazon products with full image sets in under a week — before: about 10 a week

AI Video Ads

AI-made video ads, already running on social.

Live

on paid social since September

Partner Hub

Our petfluencers, codes and credits in one place.

~1,200

micro-influencers managed in one place

Bigger without losing the brand: logo and fonts are set by code, and a person approves every ad.

Faster

Same result. Less time, lower cost.

Market analysis

A full market analysis in a day, every figure double-checked.

1 day

instead of weeks: 32 agents, 26 figures verified

Amazon listings

Product listings back live in under 90 minutes, not a week.

~80 min

for images and listing, instead of about a week

Back-office AI

AI skills the order team built for itself.

3–4 h

saved on every bank day (~100 invoices)

Personal agents

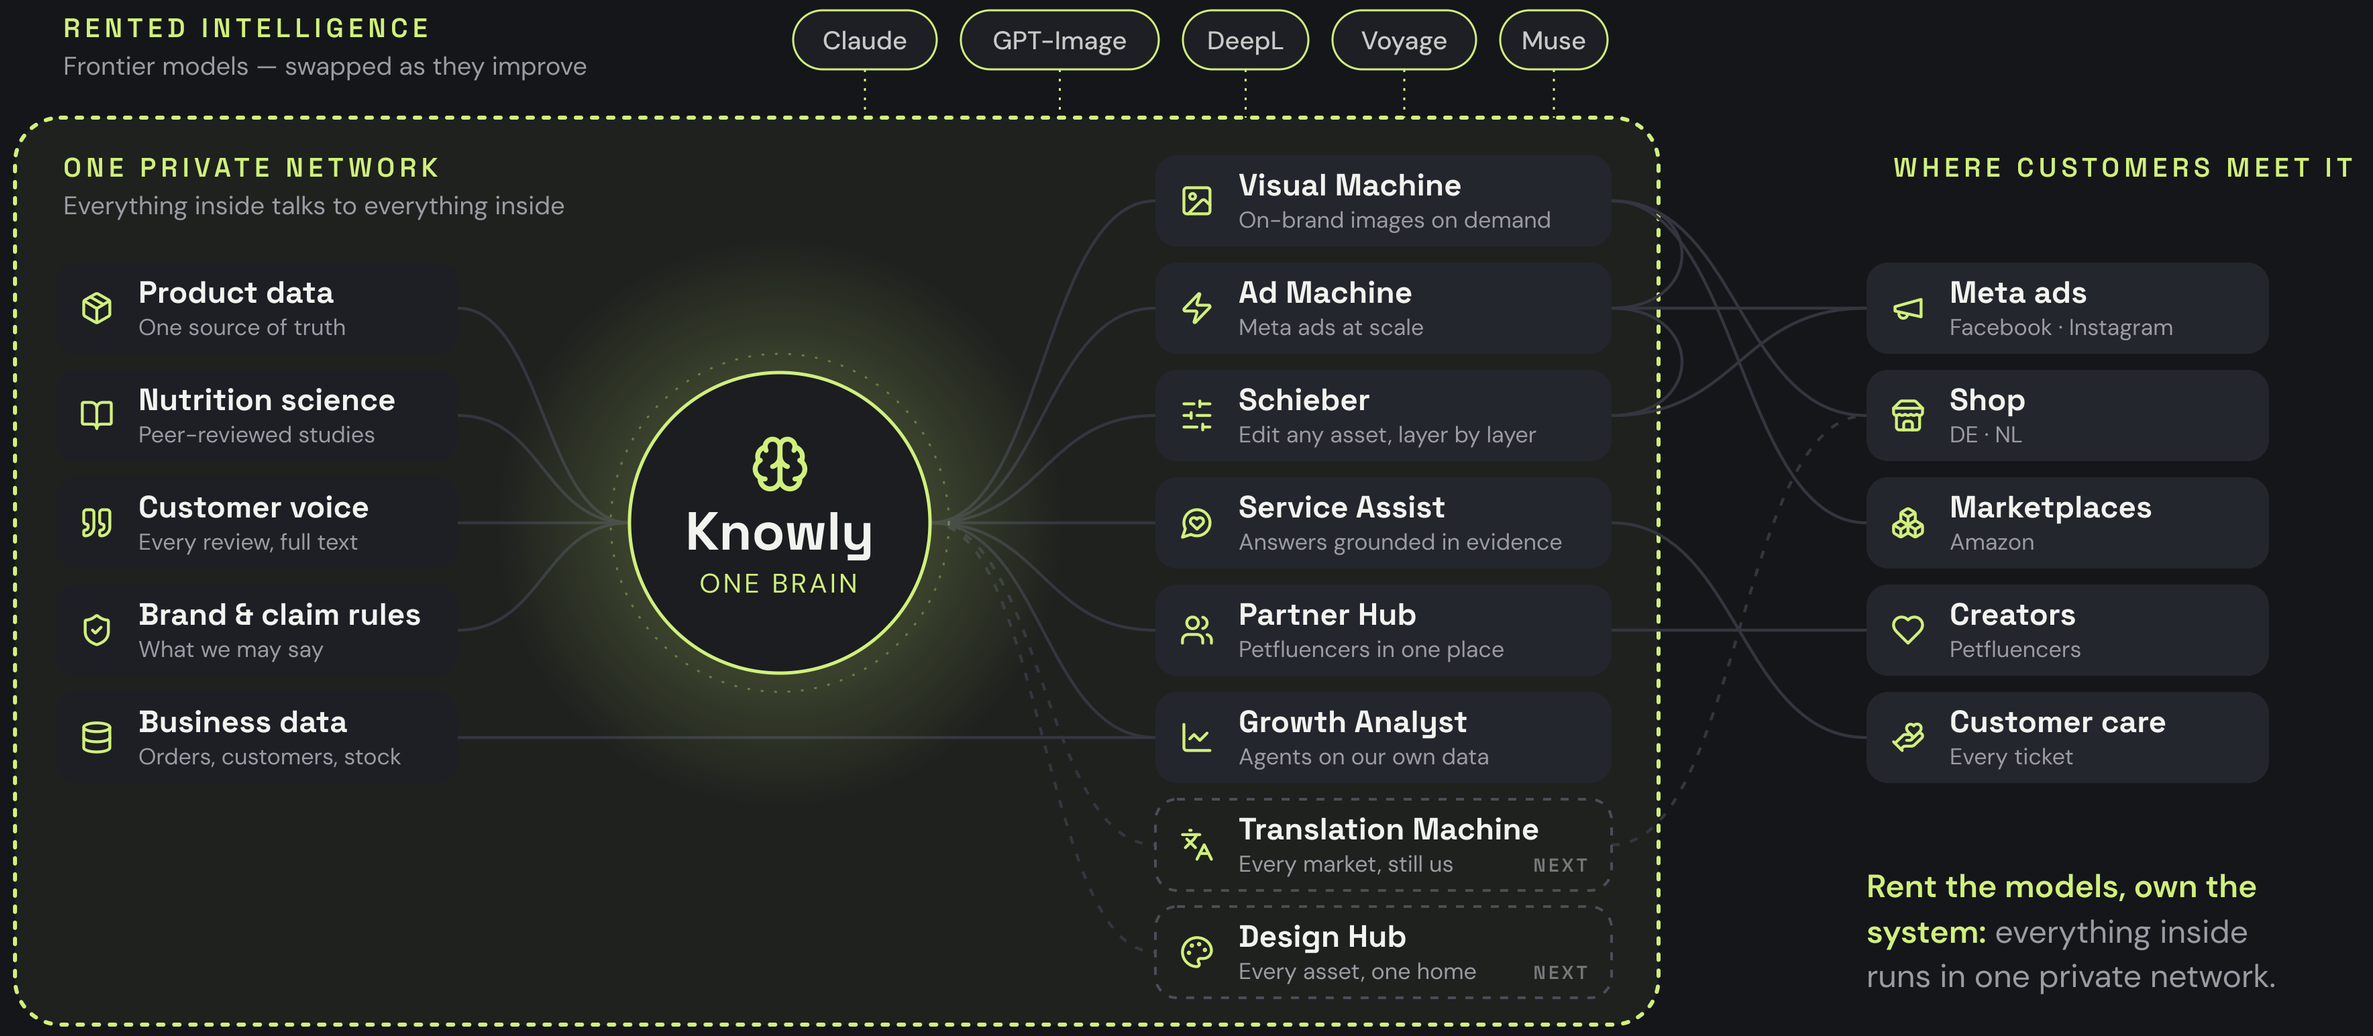

An AI agent on every desk, wired to our own tools.

49

ready-made skills, many built by the teams

Faster is the part everyone will have. We use it to buy time for better.

Behind every card: one system.

Rent the models, own the system: everything inside runs in one private network.

One ad, one journey.

How four machines work as one.

01

Watch

Ad Machine

Reads which ads the market keeps running.

Proven

starts from what already works in the market

02

Brief

Ad Machine

Turns a proven pattern into a brief for one of our products.

~30 min

machine time per batch

03

Know

Knowly

Adds the facts — and what we may and may not claim.

85

claim rules — live in shop content, next for ads

04

Make

Visual Machine

Renders the image with our real logo, fonts and packs.

≈ $0.05

per image, logo and fonts set by code

05

Check

Machine QC

Checks contrast, margins, logo space and text on image.

22 → 6

layout red flags in 69 ads, v1 → v2

06

Refine

Schieber

A human moves, rewrites, approves — layer by layer.

~1 h

per batch, human review included

07

Ship

Meta

Uploaded after approval, labelled as AI-made.

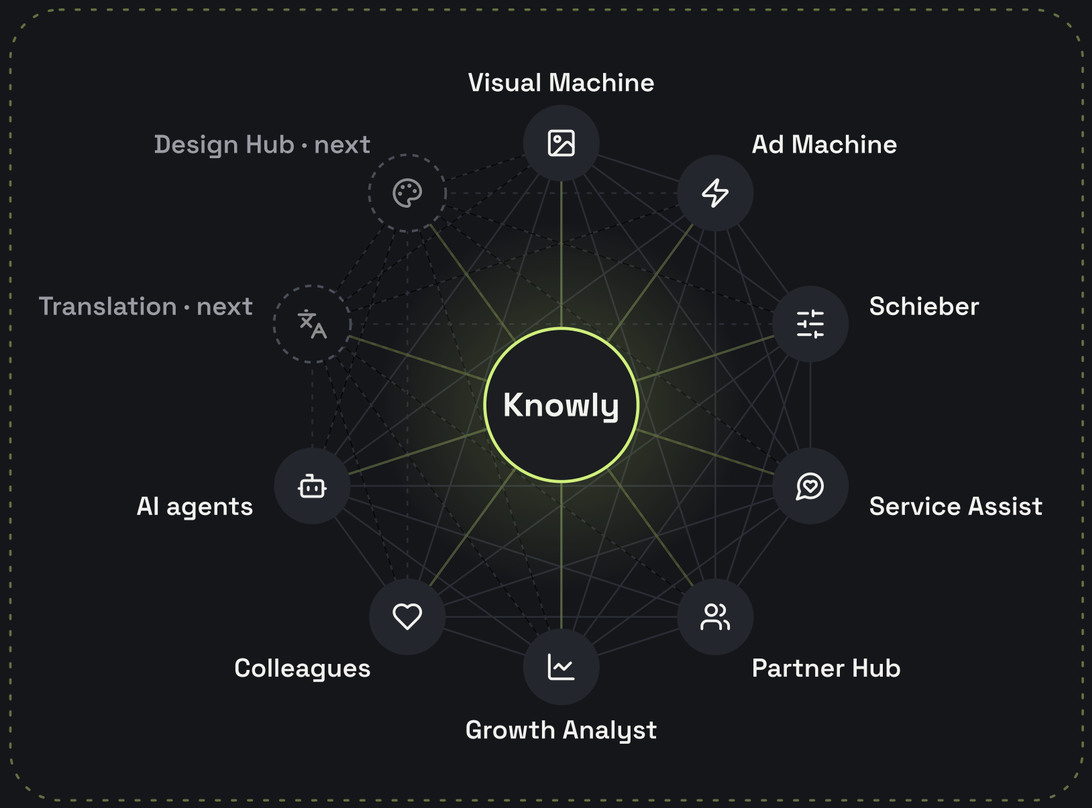

~10 a day

finished ads, each labelled as AI-made

PRODUCING EVERY DAY

No ad goes out without a human. Next: the same run in Dutch, through the Translation Machine.

One private network. One unit.

Every machine calls every other

Two dozen AI services in one network: the Ad Machine asks the Visual Machine, which asks Knowly — no detours.

Our knowledge stays ours

Product data, reviews and rules live inside our network. A model only ever sees what one task needs.

People and agents plug in

70+ colleagues have their own AI seat. One seat reaches about 300 tools through 14 connectors — documents, data, tickets, chat — and every agent can ask the same brain.

What one network makes possible.

New machines in days

Every new machine starts with everything the others already know.

The Schieber went from idea to working editor in a few days.

One truth everywhere

Shop text, service reply and ad use the same facts and rules.

Factual errors in product content: 5–7% → 0.

Rent models, own the system

We swap models when better ones arrive. Our knowledge stays.

Image model upgraded in one evening; seven model services, one network.

New markets, same rails

A new country reuses every machine we already have.

Netherlands live since 16 October 2026 — the Dutch shop was translated with AI.

Next

New machines, same brain, same network.

NEXT

Translation Machine

Every text and asset localised in our tone, not word for word.

In pilot

NEXT

Design Hub

One place where every team gets on-brand assets.

Next

NEXT

Learning Ad Machine

From producing ads to learning from how they perform.

On the roadmap

NEXT

Dutch marketplaces

The same image and listing pipeline, ready for the next marketplace.

Next: ~100 products

Five things we would tell any CEO.

1	**Build the knowledge first.**	We started with the brain, not the tools. Every machine since then plugs into it.
2	**Put everything on one network.**	A machine that cannot call the others is just another silo — with a nicer interface.
3	**Rent the models. Own the system.**	Models change every few weeks. Your data, your rules and your wiring do not.
4	**Keep a human on the slider.**	Machines make the volume. People make the call — on every ad, every reply, every claim.
5	**Give every project a number.**	Every AI project gets an owner, a number and a done-when — or it does not get built.

Faster, everyone will have.
Better, only you can build.

Bigger is what happens when both run on one system.

PETS DELI Tania Moser · CEO

Every project at a glance. As of October 2026

Better 9

Fact Gate — Live
Every claim checked

Product recommendations — Live
Ranked per pet profile, 1.4× clicks

Service Assist — Live
Reply drafts in seconds

Voice of Customer — Live
All reviews, full text

Personal pet page — Pilot
A page for every pet
